

# Micro-Controller Experiment

Week4

Teacher: 廖裕評 Yu-Ping Liao

TA: 陳大荃 Da-chuan Chen, 陳恩妮 En-ni Chen

# Class Rules

1. No drink besides water.
2. Bring a laptop and breadboard if needed.
3. Ask us TAs to sign and borrow development boards. Do not sign or ask others to sign for you without TAs' permission.
4. Arriving 10 minutes after the bell rings will be regarded as absent.
5. If you damage any borrowed equipment, you have to pay for it.

# Homework Rules

1. Includes: A. Class content, B. Class exercise, C. Homework (screenshot or video)
2. Editing software: MS PowerPoint
3. File format: PDF
4. Filename: "date\_group\_studentID\_name.pdf", like "0916\_第1組\_11028XXX\_陳OO.pdf"
5. The homework deadline is 23:59 of the day before the next class. If you are late, then your grade will be deducted.

# Contact

If you encounter any problems with this class, please get in touch with us with the following E-mails:

1. Teacher, Prof. Yu-Ping Liao 廖裕評 : [lyp@cycu.org.tw](mailto:lyp@cycu.org.tw)
2. TA, Da-chuan Chen 陳大荃 : [dachuan516@gmail.com](mailto:dachuan516@gmail.com)
3. TA, En-ni Chen 陳恩妮 : [anna7125867@gmail.com](mailto:anna7125867@gmail.com)

Or visit 篤信 Lab353 for further questions.

# Outline of the Week

1. Timer Project.
2. Homework 4-1.
3. Homework 4-2.
4. Homework 4-3.

The background features a series of concentric circles in light gray, some solid and some dashed, creating a ripple effect. A large red speech bubble is centered on the page, with the text 'Timer Project' written inside in white.

# Timer Project

# 1. Execute “\_CreatProject”

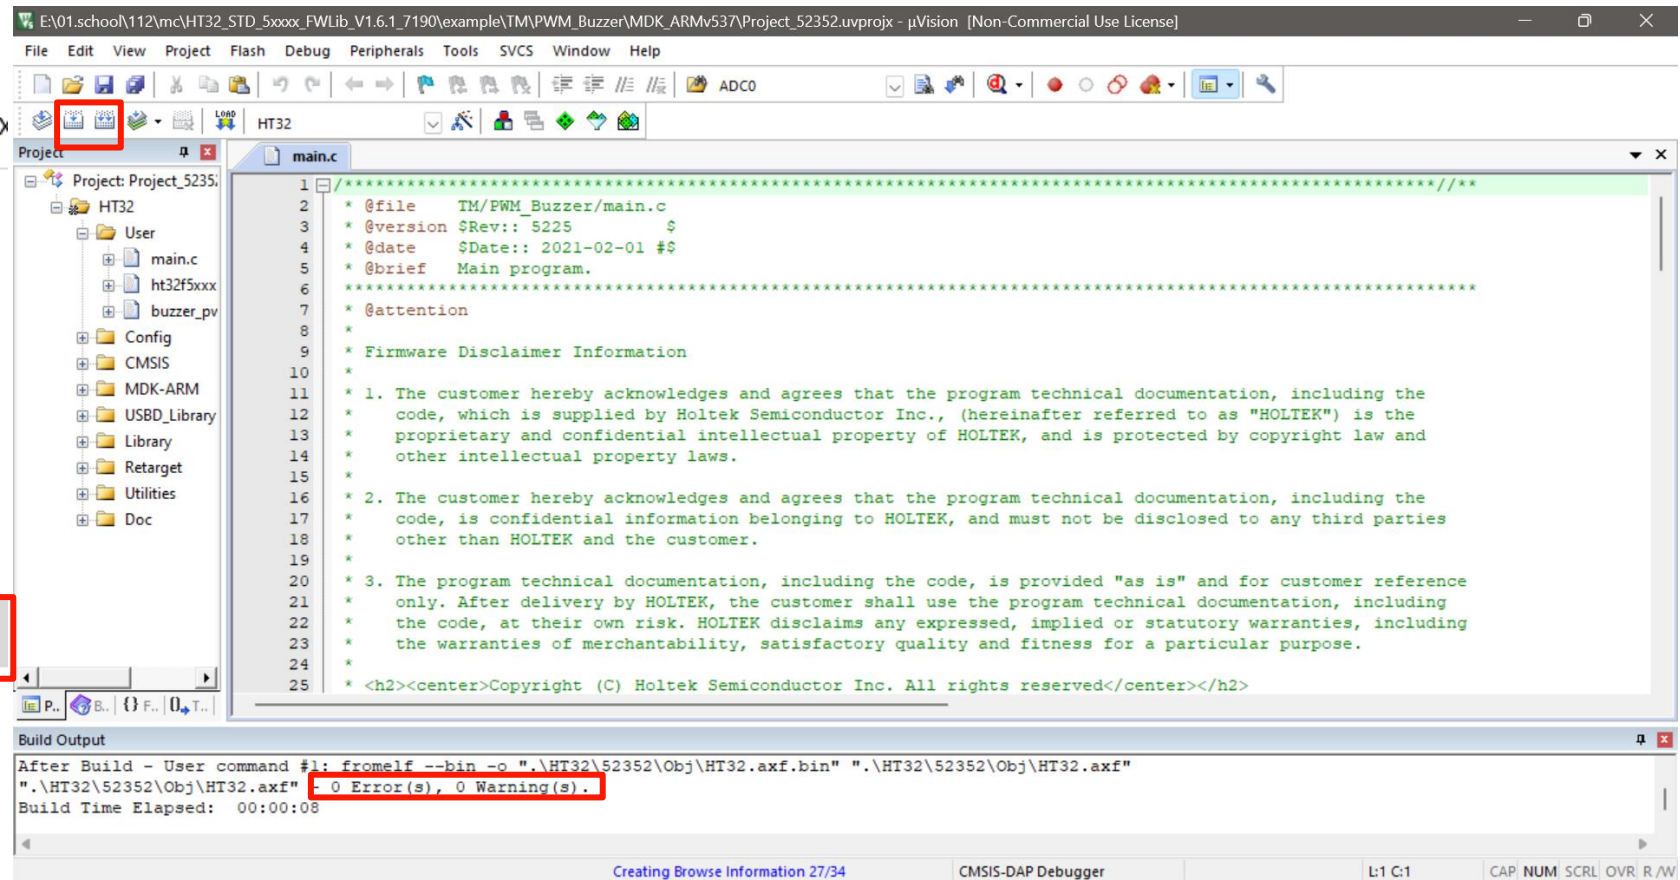

1. Go to “~/HT32\_STD\_5xxxx\_FWLib\_V1.5.1\_7084/example/TM/PWM\_Buzzer”.
2. Double click “\_CreateProject.bat”.

2 > mc > HT32\_STD\_5xxxx\_FWLib\_V1.6.1\_7190 > example > TM > PWM\_Buzzer

# Timer Repetition Register

## Timer Repetition Register – REPR

This register specifies the timer repetition counter value.

Offset: 0x08C

Reset value: 0x0000\_0000

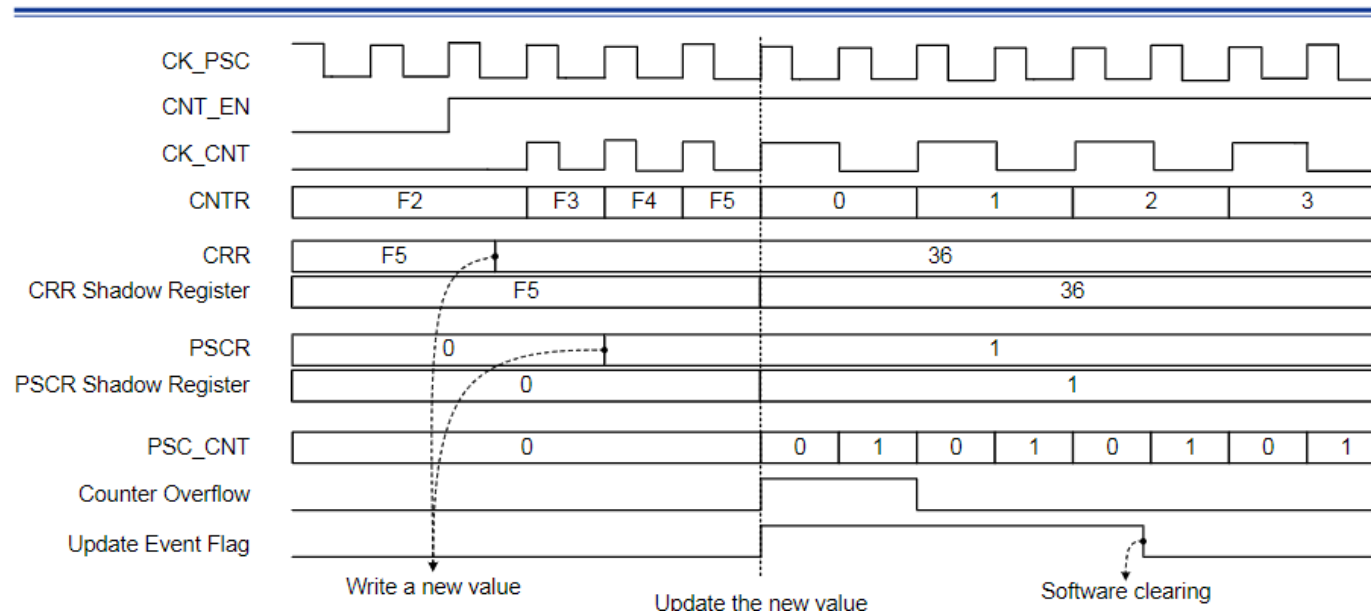

# Counter mode

## Functional Descriptions

### Counter Mode

#### Up-Counting

The counter counts continuously from 0 to the counter-reload value, which is defined in the CRR register. Once the counter reaches the counter-reload value, the Timer Module generates an overflow event and the counter restarts to count once again from 0. This action will continue repeatedly. When the update event is generated by setting the UEVG bit in the EVGR register to 1, the counter value will also be initialized to 0.

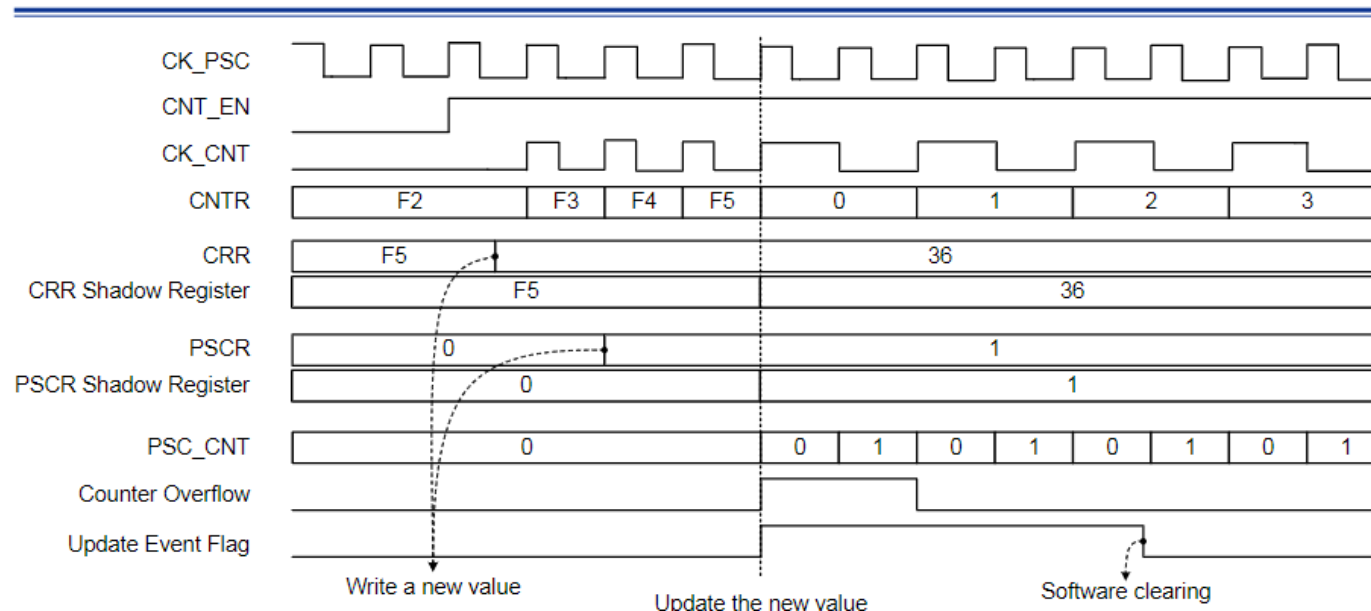

# Counter mode

## Functional Descriptions

### Counter Mode

#### Up-Counting

The counter counts continuously from 0 to the counter-reload value, which is defined in the CRR register. Once the counter reaches the counter-reload value, the Timer Module generates an overflow event and the counter restarts to count once again from 0. This action will continue repeatedly. When the update event is generated by setting the UEVG bit in the EVGR register to 1, the counter value will also be initialized to 0.

# Buzzer\_Start

```
167 void Buzzer_Start(u8 uBeeTimes, ul6 uFrequency, ul6 uActive_ms, ul6 uInactive_ms)
168 {
169     u32 uReload = (BEE_SYS_CLK / BEE_TM_PRE / uFrequency) - 1;

## Serial Port Setting

```
118 void RETARGET_Configuration(void)
119 {
120     #ifndef RETARGET_IS_UART
121         /* !!! NOTICE !!!
122          * Notice that the local variable (structure) did not have a
123          * Please confirm that there are no missing members in the p
124          */
125     USART_InitTypeDef USART_InitStructure;
126     #ifndef RETARGET_UxART_BAUDRATE
127     USART_InitStructure.USART_BaudRate = 115200;
128     #else
129     USART_InitStructure.USART_BaudRate = 115200;
130     #endif
131     USART_InitStructure.USART_WordLength = USART_WORDLENGTH_8B;
132     USART_InitStructure.USART_StopBits = USART_STOPBITS_1;
133     USART_InitStructure.USART_Parity = USART_PARITY_NO;
134     USART_InitStructure.USART_Mode = USART_MODE_NORMAL;
```

# Edit Buzzer\_Init(0)

```
67 int main(void)
68 {
69     RETARGET_Configuration();
70     Buzzer_Fun1();
71
72     Buzzer_Fun2();
73
74     Buzzer_Init(0);
75
76     while (1)
77     {
78         Buzzer_PlayTable();
79     }
```

F12

```
116 TM_TimeBaseInitTypeDef TimeBaseInit;
117
118 TimeBaseInit.Prescaler = BEE_TM_PRE - 1;
119 TimeBaseInit.CounterReload = uReload;
120 TimeBaseInit.RepetitionCounter = 0;
121 TimeBaseInit.CounterMode = TM_CNT_MODE_UP;
122 TimeBaseInit.PSCReloadTime = TM_PSC_RLD_IMMEDIATE;
123 TM_TimeBaseInit(HTCFG_BUZZER_PORT, &TimeBaseInit);
124
125 /* Clear Update Event Interrupt flag since the "TM_TimeBaseInit()" writes the UEV1G bit */
126 TM_ClearFlag(HTCFG_BUZZER_PORT, TM_FLAG_UEV);
127 printf("\r Prescaler = %4d , CounterReload = %8d\n", TimeBaseInit.Prescaler, TimeBaseInit.CounterReload);
128 }
```

Outputs the value in the register to the Tera Term display.

# Homework W4-1.

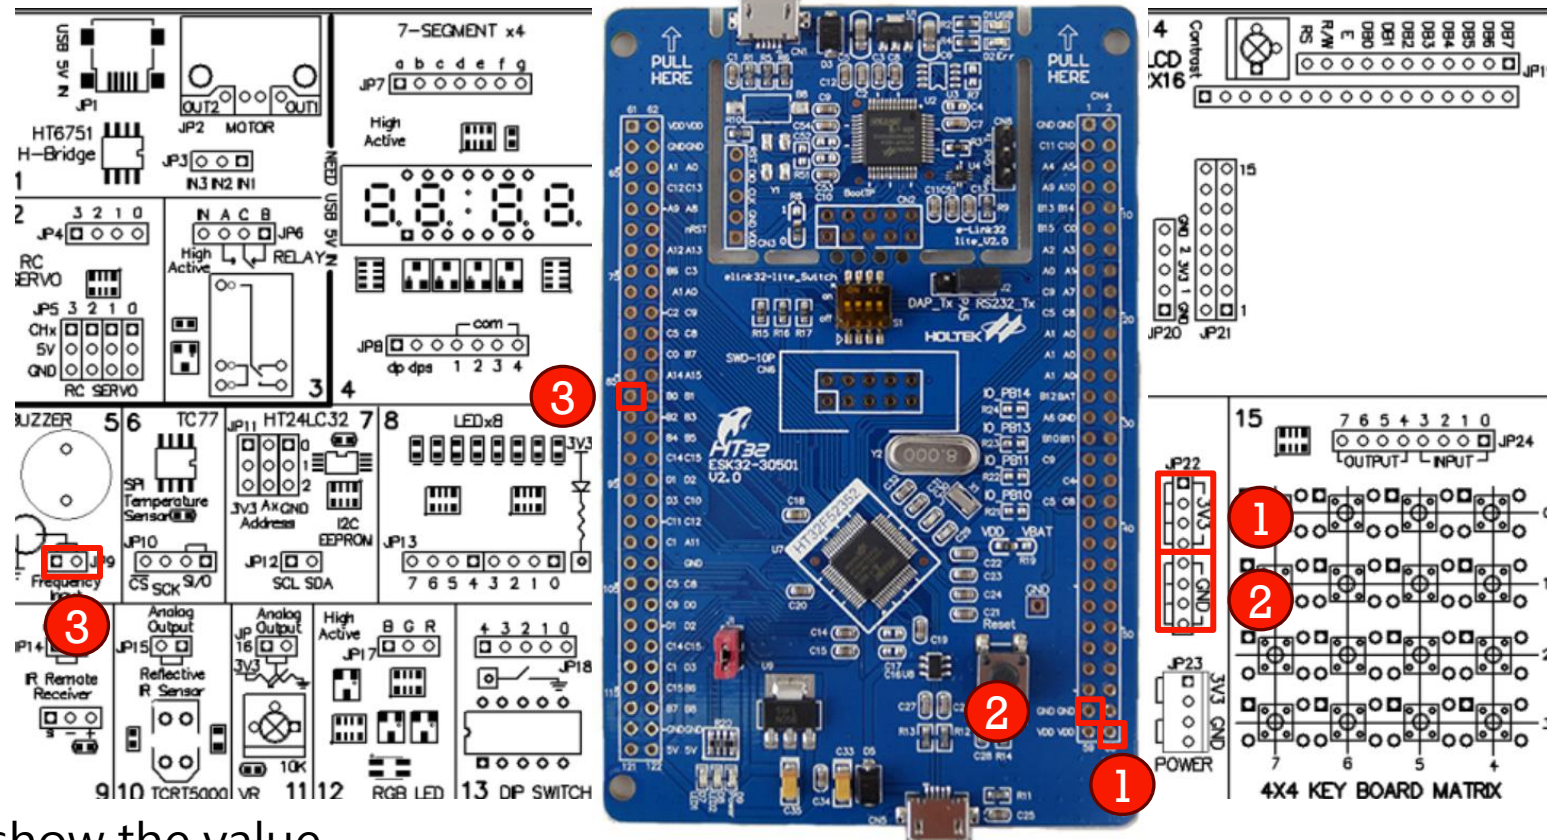

[https://github.com/CYCU-AIoT-System-  
Lab/Microcontroller-  
Experiment/blob/main/w4/TM-PWM\\_Buzzer-  
Experiment\\_Steps.md](https://github.com/CYCU-AIoT-System-Lab/Microcontroller-Experiment/blob/main/w4/TM-PWM_Buzzer-Experiment_Steps.md)

# Execute the example

- Objective: Use timer to control buzzer and display in Tera Term.

- Hint:

## 1. Wiring

## 2. TERA TERM show the value

The background features a series of concentric circles in light gray, some solid and some dashed, creating a ripple effect. In the center, there is a red speech bubble with a white outline. The text "Homework W4-2" is written in white inside the bubble.

# Homework W4-2

# Play a part of For Alice music

- Objective: Edit the frequency array to play a part of "For Alice".
- Hint:
  1. Use pin **B0**.
  2. Look for numbered musical notation of "**For Alice**".
  3. Find the corresponding scale frequency.
  4. Edit gBee\_Scale.

The background features a series of concentric circles in light gray, some solid and some dashed, creating a ripple effect. A large red speech bubble is centered on the page, with the text 'Homework W4-3' written inside in white.

# Homework W4-3

# Play music faster.

- Objective: Edit delay time.
- Hint:
  1. Use pin **B0**.
  2. Edit Buzzer\_PlayTable function
